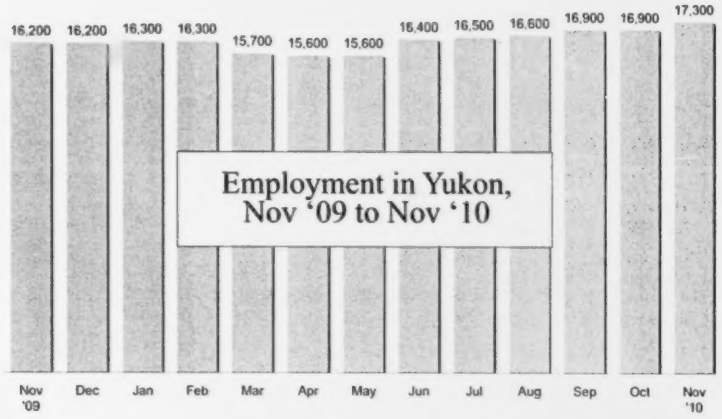
BUREAU OF STATISTICS

YUKON EMPLOYMENT

November 2010



Yukon's labour force in November '10 (18,000) increased by 400 compared to the figure one year earlier, November '09 (17,600). Of the November 2010 labour force figure, 17,300 were employed and 800, or 4.4%, were unemployed. One year ago, in November 2009, there were 17,600 individuals in the labour force, of whom 16,200 were employed and 1,400, or 8.0%, were unemployed.

November 2010 Employment at a glance:

• Labour force:	18,000
• Employed:	17,300
• Unemployed:	800
• Unemployment rate:	4.4%
-Last month	*5.6%*
-One year ago	*8.0%*

Definitions 12

PLEASE NOTE: Due to rounding, the sum of individual Labour Force Survey characteristics at times does not equal the labour force and/or total employment figures. All figures quoted for Yukon are three-month moving averages. For a definition of three-month moving average, please go to the list of definitions on page 12.

With the January 2010 Labour Force Survey release, Statistics Canada had revised all seasonally adjusted estimates (1992-2009) using a new seasonal adjustment method; therefore data contained in this publication are not comparable to figures published prior to the January 2010 release.

Figures From Across Canada—November 2010

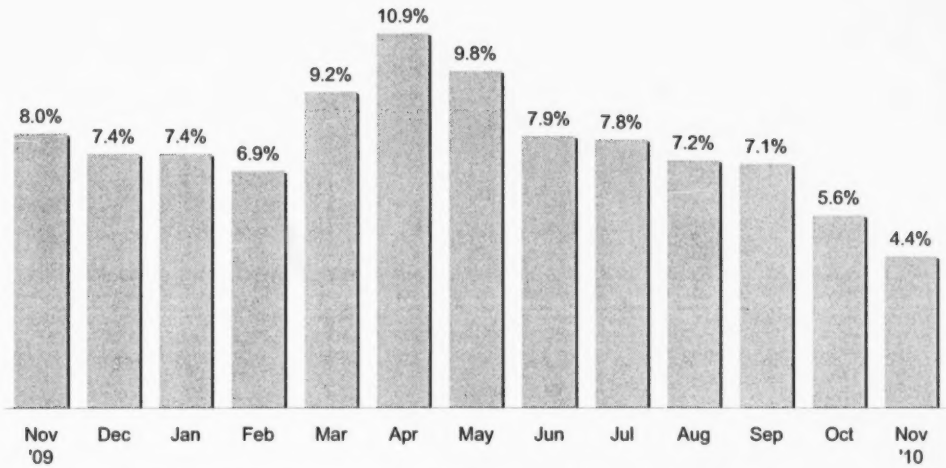
	Number Employed	Number Unemployed	Unemployment Rate
Yukon	**17,300**	**800**	**4.4%**
Canada	17,227,900	1,426,900	7.6%
Newfoundland & Labrador	224,600	36,000	13.8%
P.E.I.	71,000	10,100	12.5%
Nova Scotia	450,500	47,600	9.6%
New Brunswick	361,700	41,400	10.3%
Quebec	3,935,500	336,800	7.9%
Ontario	6,690,400	598,400	8.2%
Manitoba	622,300	33,300	5.1%
Saskatchewan	527,000	30,500	5.5%
Alberta	2,018,800	119,900	5.6%
B.C.	2,326,100	173,000	6.9%
N.W.T.	21,800	1,400	6.0%

This table shows that Yukon is the lowest in the country in terms of the unemployment rate (4.4%). Manitoba's unemployment rate (5.1%) was second lowest, while Newfoundland's rate (13.8%) was highest.

Note: Nunavut's unemployment rate of 13.6% is available only as an "unadjusted" estimate and is therefore not included in this table of seasonally adjusted data.

Yukon, NWT and Nunavut figures are three-month moving averages and are therefore not included in the overall figure for Canada.

Yukon's Unemployment Rate



The seasonally adjusted unemployment rate had remained relatively stable through the winter of 2009/10. The rate then increased to 10.9% in April 2010. Since April, there has been a steady drop, seven consecutive months, in Yukon's unemployment rate to November's rate of 4.4%. The following changes have occurred on a month-to-month basis:

		Percentage points*
2010	• October to November	-1.2
	• September to October	-1.5
	• August to September	-0.1
	• July to August	-0.6
	• June to July	-0.1
	• May to June	-1.9
	• April to May	-1.1
	• March to April	1.7
	• February to March	2.3
2009	• January to February	-0.5
	• Dec. '09 to Jan. '10	0.0
	• November to December	-0.6
	• October to November	1.7

** percentage point is the actual numerical difference between two percentages, such as: 10% - 8% = 2 percentage points.*

What is the unemployment rate, and how is it calculated?

The unemployment rate shows the relationship between the number of unemployed and the labour force. The labour force includes those individuals 15 years of age and older who are either employed or unemployed but looking for work. The higher the value of the unemployment rate, the greater the number of individuals unemployed as compared to the labour force.

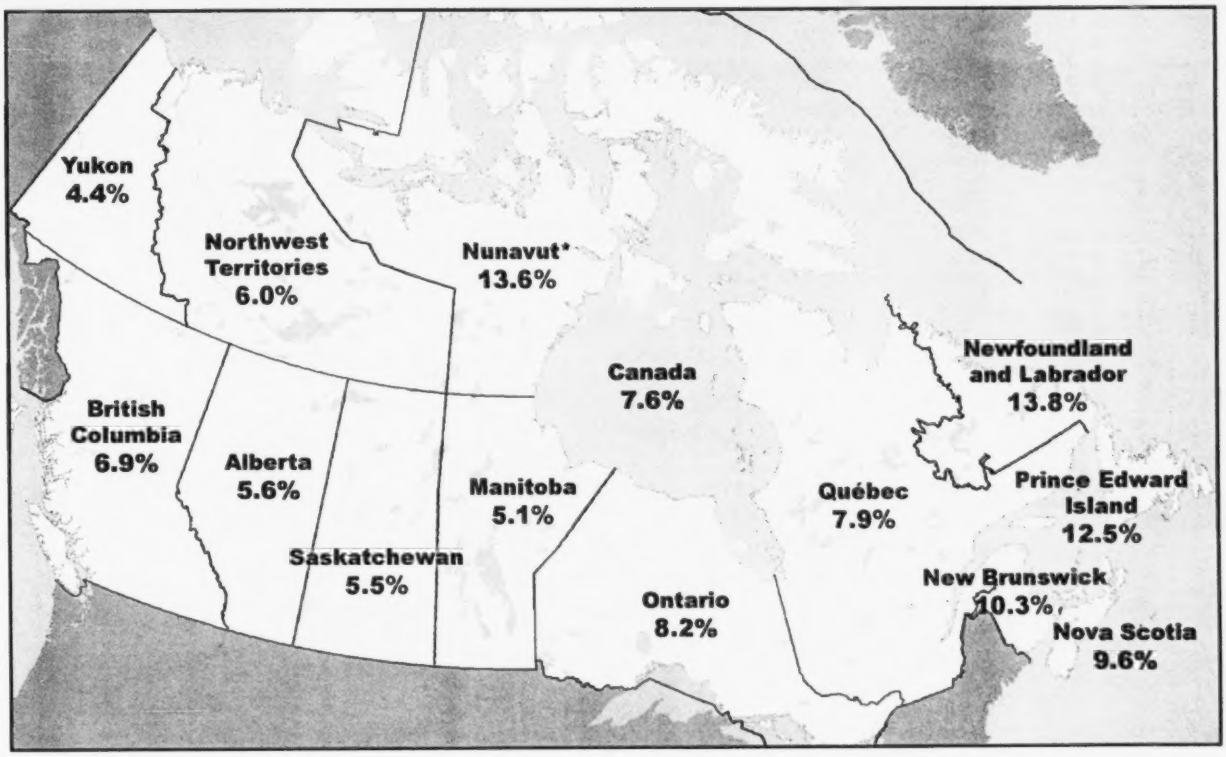
The survey that estimates Yukon's unemployment rate, the Labour Force Survey (LFS), has undergone survey redesign so comparable data is only available back to 1995.

Over the last 16 years the average unemployment rate for November has been 8.5%.

Looking at the change in the unemployment rate between October and November in previous years, the rate has risen 6 times and fallen 9 times and remained the same once since 1995.

	October	November	Change
2010	5.6%	4.4%	-1.2%
2009	6.3%	8.0%	1.7%
2008	5.0%	5.5%	0.5%
2007	5.7%	5.6%	-0.1%
2006	4.6%	4.0%	-0.6%
2005	5.2%	4.5%	-0.7%
2004	5.6%	6.1%	0.5%
2003	10.6%	9.4%	-1.2%
2002	9.6%	9.6%	0.0%
2001	10.5%	9.9%	-0.6%
2000	11.4%	12.0%	0.6%
1999	12.8%	12.4%	-0.4%
1998	11.4%	12.0%	0.6%
1997	13.2%	12.1%	-1.1%
1996	9.7%	10.9%	1.2%
1995	10.8%	10.1%	-0.7%
Average 1995 to 2010	**8.6%**	**8.5%**	**-0.1**

Unemployment rates: Canada, Provinces and Territories — November 2010



*The unemployment rate for Nunavut is NOT seasonally adjusted.

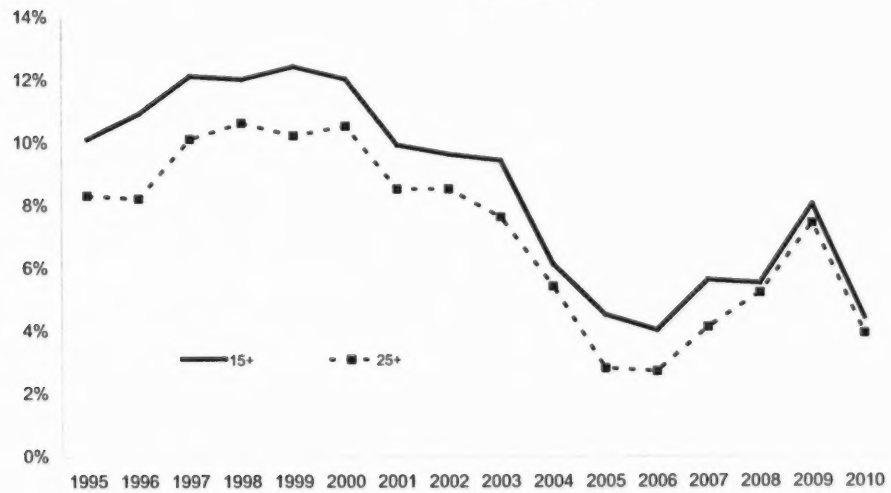
Yukon's November Unemployment Rate, 1995 to 2010



Yukon's Employment - seasonally unadjusted figures

A word about "adjusted" vs. "unadjusted"
The statistics on the next 5 pages are "seasonally unadjusted," as opposed to the figures on pages 1 through 6, which are "seasonally adjusted."

"Seasonally adjusted" refers to the technique of adjusting the "raw" figures to remove seasonal movements (*see page 12 for further explanation*). As such, "seasonally adjusted" employment figures are widely used and quoted, as they are considered to be a more accurate picture of the current employment situation than the "raw" or "unadjusted" figures.

Some of the variables mentioned in the next 5 pages are available only in the "unadjusted" format, while others are available both as "adjusted" and "unadjusted." Comparisons between the "adjusted" and "unadjusted" series should not be made.

Yukon's Labour Force Characteristics (unadjusted)

		Labour Force	Employed	Unemployed	Not in Labour Force	Unemployment Rate	Participation Rate	Employment Rate

1995	Nov	16,700	15,200	1,500	4,300	9.0	79.5	72.4
Average Nov 1995 to 2010		**17,200**	**15,800**	**1,400**	**5,600**	**8.0**	**75.6**	**69.6**

Note: *Due to rounding, the sum of individual LFS characteristics at times does not equal the labour force and/or total employment figures. Percentages have been adjusted on the basis of the reported unemployment rate. All figures quoted for Yukon are three-month moving averages. For a definition of three-month moving average, please go to the list of definitions on page 12.*

Where the numbers come from

Every month Statistics Canada surveyors in each province and territory of Canada interview a representative sample of individuals 15 years of age and older. The surveyors ask these individuals if they were working, or were looking and available for work, during the "reference week" (usually the 3rd week of the month). Individuals are counted as employed if:

- *they worked for at least 1 hour during the reference week ("work" includes self-employment).*

Individuals are counted as unemployed if:

- *they were without work but had looked for work in the past 4 weeks;*
- *they had been laid off but were not looking for work because they expected to return to their original work;*
- *they were not looking for work because they had a new job starting within 4 weeks.*

If someone is neither employed nor unemployed they are then defined as not in the labour force and therefore not counted in the unemployment rate. However, they are still considered to be part of the working-age population.

The survey described above is called the Labour Force Survey (LFS). Yukon has been included in the LFS since January 1992. However, the national rates for Canada do not include any of the territories.

The objectives of the LFS are to divide the working-age population into three mutually exclusive classifications – employed, unemployed and not in the labour force – and to provide descriptive and explanatory data on each of these categories.

The LFS is the only source of monthly estimates of total employment including the self-employed, full- and part-time employment, and unemployment. It publishes monthly standard labour market indicators such as the unemployment rate, the employment rate and the participation rate.

In Yukon, the LFS sample is designed to represent approximately 92% of the working-age population (Yukoners 15 years of age and older). Yukoners living in unorganized areas, full-time members of the armed forces and people living in institutions are not represented in the sample.

As a "household-based" survey, the LFS counts individuals as part of the labour force in the province or territory their home is in. Therefore, if an individual is working outside of Yukon, in the NWT for instance, but still has their home in Yukon, they are counted in Yukon's labour force.

***Suppression of Data**. For the Labour Force Survey in Yukon, Statistics Canada suppresses any figure that is below 200 for confidentiality reasons, in order to ensure the confidentiality of each individual respondent to the survey. In turn, percentages (i.e. employment or unemployment rates) based on suppressed numbers will also be suppressed.*

Definitions:

1. **Employment**
   Employed persons are those who, during the reference week, did any work for pay or profit, or had a job and were absent from work.

2. **Employment rate**
   Also referred to as "employment/population ratio," it is the number of employed persons expressed as a percentage of the population aged 15 years and over. The employment rate for a particular group (for example, women aged 25 years and over) is the number employed in that group expressed as a percentage of the population for that group.

3. **Goods-Producing Industries**
   Goods-Producing Industries (or goods sector, or goods industries): includes agriculture, other primary industries (forestry; fishing and trapping; mines, quarries and oil wells), manufacturing, construction and utilities (electric power, gas and water).

4. **Labour force**
   The labour force is the civilian non-institutional population 15 years of age and over who, during the survey reference week, were employed or unemployed.

5. **Not in the labour force**
   Persons not in the labour force are those who, during the reference week, were unwilling or unable to offer or supply labour services under conditions existing in their labour markets; that is, they were neither employed nor unemployed.

6. **Participation rate**
   The participation rate is the total labour force expressed as a percentage of the population aged 15 years and over. The participation rate for a particular group (for example, women aged 25 years and over) is the labour force in that group expressed as a percentage of the population for that group.

7. **Reference Week**
   The reference week is the entire calendar week (from Sunday to Saturday) covered by the Labour Force Survey each month. It is usually the week containing the 15th day of the month. The interviews are conducted during the following week, called the Survey Week, and the labour force status determined is that of the reference week.

8. **Seasonal adjustment**
   Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those that are caused by regular annual events such as climate, holidays, vacation periods and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.

9. **Self-employed**
   There are two broad categories of workers: those who work for others and those who work for themselves, namely, the self-employed. The self-employed includes working owners of incorporated businesses, working owners of unincorporated businesses and other self-employed.

10. **Service-Producing Industries**
    Service-Producing Industries (or service sector, or service industries): includes trade; transportation and warehousing; finance, insurance, real estate and leasing; professional, scientific and technical services; management, administrative and other support; educational services; health care and social assistance; information, culture and recreation; accommodation and food services; other services; and public administration.

11. **Three-Month Moving Average**
    All monthly figures for the Territories, whether seasonally adjusted or unadjusted, are three-month moving averages – for example, the March 2008 unemployment rate of 4.5% is actually an average of the unemployment rates for the months of January, February and March. April's unemployment rate will become the average of the rates for February, March and April.

12. **Unemployment**
    Unemployed persons are those who, during the reference week, were available for work and were either on temporary layoff, had looked for work in the past four weeks, or had a job to start within the next four weeks.

13. **Unemployment rate**
    The unemployment rate is the number of unemployed persons expressed as a percentage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number unemployed in that group expressed as a percentage of the labour force for that group.
